nation. Yutaka Suzuki and Dr. Sumio Sugano in anter, University of Tokyo Institute of Medical Inversity of Georgia, sequencing done in the mitversity of Georgia, sequencing done in the mitve and Bioinformatics, University of Georgia. Deen trimmed to exclude vector and regions below three-prime sequences are presented as their and have been trimmed to exclude polyA.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Daylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269619.

The sequence in this sequence version replaced gi:23269619.

The sequence in this assembly is a combination of BAC based reads and whole genome shockgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contigs-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20760 GAICTICCECCCACCACCATCTATTTATCATCTTCTTGACTGGGCATAGTGGGCAATGGGTT 20819

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40069 40167; contig of 40067 bp in length

MMLCR13

Mus musculus lcr-1 gene, exon 2.

Nu 280113.1

Z80113.1 GI:1655638

CXC chemokine receptor 4; CXCR-4; lcr-1 gene.

Mus musculus (house mouse)

Mus musculus (house mouse)

Mus musculus (house mouse)

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Giurognathi; Muridae; Mus.

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mus musculus (house it to 1422)

Schubel, A., Burgstahler, R. and Lipp, M.

The mouse homologue of the human HIV coreceptor CXCR-4 (FUSIN):

High expression in thymus and lymphoid tissues

On May 13, 2003 this sequence version replaced gi:23115278

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table below represents a caffeld in the Atlas assembly (a 'contig-scaffold'). Within each contig are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   * NOTE: Estimated insert size may differ from sequence length

* NoTE: This is a 'working draft' sequence. It currently

* NOTE: This is a 'working draft' sequence. It currently

* Consists of I contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

Mouse CXC chemokine receptor binding to PBSF/SDF-1 pre-B cell stimulatory factor - is useful for screening of potential HIV infection and AIDS inhibitors.

Claim 3; Page 39-42; 76pp; Japanese.

The present sequence encodes a murine CXC chemokine receptor which binds to the mouse CXC chemokine pre-B cell stimulatory factor PBSF/SDF-1. The nucleic acid is isolated from mouse pre-B cell line DW34. The receptor and cells expressing it can be used in the study and mapping of the

Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation substance capable of potentiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies

The nucleotide sequences of the 2 PF4ARs are given in AAQ80521 and AAQ80522, and their respective amino acid sequences in AAR68812 and AAR68813. (Updated on 25-MAR-2003 to correct PN field.)

Antibodies directed against the interleukin-8 receptor B can be used to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid interleukin-8 and particularly inflammatory bowel disease and chronic lung inflammation. When immobilised, these antibodies may be used to detect interleukin-8 receptor B expression in cells and tissues and for affinity purification of interleukin-8 receptor B from cells. This sequence is an additional chemokine superfamily receptor which was identified by probing lamda libraries of genomic DNA from a human monocyte-like cell line (L-60) and human peripheral blood lymphocytes using a large fragment of the interleukin-8 type A receptor DNA (see AAQ99006). (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  50 GCAGGTAGCAGTGACCCTCTGAGGCGTTTGGTGCTCCGGTAACCACCACGGCTGTAGAGC

The IL-8 receptor cDNA sequence was isolated (see AAQ29505) and a 874bp sub-fragment of the coding sequence was used as a probe to screen human new 11 line HL60 and human peripheral blood lymphocyte cDNA libraries. Two new gene sequences were found that are clearly related to the IL-8 receptor. One of these was contained in combined clone 8rr 20.15 and is predicted to encode an amino acid sequence which is 34% identical with both the high and low affinity IL-8 receptors. See also AAQ37107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated human platelet factor 4 super-family receptor polypeptide and corresp. antibodies and DNA - useful as diagnostic and screening agents, and for treating inflammation or PF4AR-mediated disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering to a mammal a compound that lowers the level of neuropeptide Y (NPY) in the serum or cerebrospinal filuid (CSP) or a compound that lowers the level of inositol phosphate (IP) or extracellular signal-regulated kinase (ERK). The method is specifically used to treat (including by gene therapy) or prevent osteoporosis, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in clinical trials and for identifying subjects at risk. The present sequence is a human NPY 33 receptor DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    103

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concominant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans denhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human polynucleotide, which is used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   77
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            An antibody for the treatment or prevention of HIV-infection comprises a gpl20 portion which binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational change.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12 dececación de de de deserción de de deserción de de

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stromal cell-derived factor lalpha (SPF1a). The method is used for stimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibition of this process is useful in treatment and prevention of a very wide range of diseases, such as, infection (by bacteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS)), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, cathor asthma, parkinson's disease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, anginal pectoris, wycardial infarction, stroke, ulcers, benign prostatic hypertrophy, comparation, osteoporosis, anginal prostatic hypertrophy, comparation, stroke, ulcers, benign prostatic hypertrophy, comparation, and dyskinesias (e.g. Huntingdon's disease), inflammatory of disease, atherosclerosis, resembled and angiogenic disease, congestive cheart failure, cardiac remodeling, angiogenic disease, congestive and Kaposi Sarcoma. This sequence encodes the human CXC chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
